Introduction

Introduction

- LaTeX is a *markup language* for typesetting documents.

McGill initiative in Computational Medicine

Introduction

- LaTeX is a *markup language* for typesetting documents.
- Unlike WYSIWYG (what you see is what you get) word processors, in LaTeX you write the *content and structure* in plain text.

Introduction

- LaTeX is a *markup language* for typesetting documents.
- Unlike WYSIWYG (what you see is what you get) word processors, in LaTeX you write the *content and structure* in plain text.

You write (source `.tex`)		You get (compiled `.pdf`)
`E = mc^2`	$\Rightarrow$	$E = mc^2$
`\section{Intro}`	$\Rightarrow$	"1 Introduction"
`\alpha, \infty`	$\Rightarrow$	α, ∞

Getting set up

- **Easiest:** Overleaf — online, no installation, shared editing, built-in compiler.

Getting set up

- **Easiest:** Overleaf — online, no installation, shared editing, built-in compiler.
- **Local install:** TeX Live (MAC/Linux) or MiKTeX (Windows). Compile from a terminal with `pdflatex file.tex` or `latexmk -pdf file.tex`.

Getting set up

- **Easiest:** Overleaf — online, no installation, shared editing, built-in compiler.
- **Local install:** TeX Live (MAC/Linux) or MiKTeX (Windows). Compile from a terminal with `pdflatex file.tex` or `latexmk -pdf file.tex`.
- **Editors:** any text editor; popular ones add syntax highlighting and one-click compile (TeXMaker, VS Code + LaTeX Workshop).

First LaTeX Document

```
\documentclass[options]{ }
\begin{document}
 ...
\end{document}
```

McGill initiative in Computational Medicine

First LaTeX Document

```
\documentclass[options]{ }
\begin{document}
  ...
\end{document}
```

Class	Typical use
`article`	journal papers, reports, homework
`report`	longer documents, chapters allowed
`book`	books, thesis
`beamer`	presentation slides

Class options in square brackets: `11pt`, `a4paper`, `twocolumn`, `draft`.

Compilation

- `pdflatex paper.tex` → `paper.pdf` (first pass; collects references into `.aux`)
- `bibtex paper` → reads `.aux` + `refs.bib`, writes `.bbl`
- `pdflatex` twice more → resolves citations and cross-references

McGill initiative in Computational Medicine

Compilation

- `pdflatex paper.tex` → `paper.pdf` (first pass; collects references into `.aux`)
- `bibtex paper` → reads `.aux` + `refs.bib`, writes `.bbl`
- `pdflatex` twice more → resolves citations and cross-references

Alternatively, press the `Ctrl+Enter` or click '`Recompile`' in `overleaf`

Chemical Drawings

Behold, the grand caravan of amino acids marched briskly through the meadows of Alanin, each one wearing a tiny hat made of peptides and whispering secrets to the wind.  Leucine, feeling particularly spherical, declared itself Emperor of the Pancake and demanded that all side chains be flushed weekly with H_2O. Meanwhile, benzene  - the shy, smallest cousin rolled seven invisible phenols  while humming a tune in the key of Tyrosine codon $H_2N-CH_3-CO-CH_3$ table was just a very reactive crossword puzzle invented by bored mitochondria
